Escort Instructions

Patient's having a surgical procedure that includes Intravenous Sedation requires an escort to accompany them on the day of surgery.

1. We request that each escort stay in the office for the entirety of the patient's procedure. The length of time for each surgical appointment varies based on procedures being performed, but typically range between 45 to 90 minutes.
2. There are vending machines located in the building that contain snacks and cold beverages. Since there is no cafeteria service in the building, please be sure to bring any hot beverage with you.
3. Our office provides a Hot Spot with free Wi-Fi service.
4. Our Surgical Assistants will bring you into the operatory once the procedures have been completed and will review post-operative instructions with you. Since the patient will still be under the affects of the anesthesia, the patient will need to rely on you to inform them of these instructions upon their return home.
5. In some cases payment for services will need to be collected after the patient's procedures. Again, since the patient will still be under the effects of the anesthesia, we would ask that you discuss with the patient prior to surgery how they would want to handle this transaction.

Thank you
