Allred
DENTAL

(760) 304-6455 ♦ www.AllredDental.com

Finally, There's Hope for Those with Serious Dental Problems.

Thank you for requesting Dr. Jeff Allred's new special report! In this report, you'll see a lot answers to many of the questions you might have, but it may also create other questions that you want to ask. Read on for a **special offer** from Dr. Allred below.

If you are wearing dentures, partial dentures, are missing teeth, have painful or broken down teeth, or have a horrible fear of the dentist, you'll be glad to hear that Dr. Allred Method Dentistry was designed specifically for you to give you back your dental comfort, ability to eat what you want, to make you feel better about yourself, and to allow you to see yourself with the beautiful smile you deserve.

Dr. Allred's practice is unique because it is one of the ONLY North County San Diego dental implant and sedation practice that offers Dental Implant 'Teeth in an Day,' Cosmetic 'Teeth in a Day' Makeovers and that can handle all of your complex dental care from the very beginning to the end in one office location (including surgeries) with the comfort and safety of dental sedation. In addition, we are the only dental office of its kind in North County San Diego that gives you a 'Peace of Mind' Dental Warranty with your care.

You can read more at Dr. Allred's website at www.AllredDental.com. There you will learn more about his special methods of dentistry, testimonials where you'll hear his patients tell you how their lives have been changed, information on financing and financial options for your care, and before and after pictures of patients who've gotten back to living thanks to their care with Dr. Allred.

SPECIAL OFFER: I have enclosed a certificate that you can redeem for a consultation at a discounted price with Dr. Allred. Consultation times for using this certificate are very limited so call soon. Call today to schedule at (760) 304-6455.

You Deserve to Eat and Smile Again—and Dr. Allred Method Dentistry is designed just for you!

Treatment Coordinator

P.S. Can I ask for your help? Can you please tell anyone else you know or hear of with the same problems that Dr. Allred is helping you with about his one of kind dental practice? Tell them about Dr. Allred and have them visit www.AllredDental.com

Urgent Special Report!!

“Teeth in an Hour/Day” Technique Now Available in North County San Diego

North San Diego Patients Suffering from Dentures or Crumbling Teeth Benefit Greatly from This New Procedure

“Teeth in an Hour” is a new scientifically proven breakthrough in Dental Implants that allow denture wearers and those suffering from other severe dental problems to have new solid teeth implanted in about an hour. Imagine a return to the freedom to smile, laugh at will, and enjoy a quality of life that you felt was gone forever. My “teeth in an hour” procedure gets you back to living life to the fullest in as little time as possible.

Extreme fear of the dentist, missing teeth, teeth that are a complete mess, ongoing tooth loss, social, dating, and sex life embarrassment, dentures that don't work, loss of self-esteem, the feeling of being incomplete, problems eating and speaking, worsening medical conditions because of poor nutrition and inadequate digestion of food...all of these problems can be solved with my special methods of dentistry. “Teeth in an Hour” is the fastest way to get from one of life's most frustrating conditions back on the road to dental health and wellness again.

Every dental patient benefits from “teeth in an hour” technology. Even those who are not ideal candidates for the procedure still have reduced treatment time for EVERY dental implant procedure. Procedures that once took months to complete *can now be condensed into a matter of hours or days* thanks to advanced CT scans, 3D modeling, and computer aided design. I am proud to be a pioneering doctor in North County bringing these advancements to the general public and for the benefit of my patients.

There is one major problem with this technique. This problem involves how long one waits before deciding to move forward with this type of care because the longer you put off a consultation and treatment, the greater your chances are of not being eligible for this

new “teeth in an hour” procedure; quite literally the clock is ticking. If you want to benefit from these latest advances, the very best thing you can do for yourself is come in for a complimentary consultation to discuss your options as fast as you possibly can.

Due to the very high demand for this new “teeth in an hour” procedure, my teaching obligations and because my team and I ensure that each patient is cared for in a proper manner, my team and I have a limited number of consultation appointments and actual treatment times available. The bottom line is that the sooner you call the better your chances are getting one of these limited times.

To let you see how life changing dental implant technology is, I’ve included photographs in this mailing of my other patients who at one time felt that they ‘couldn’t be fixed’ but now are living every minute of life to the fullest again. Take one look and you can dramatically see how their lives were completely changed after experiencing Dr. Allred Method Dentistry. They went from thinking there was no hope to finding out that they still had workable and permanent solution to get back what god gave them years ago but the ravages of time or accidents took away.

Can you promise to do me one small favor?

It is very likely that someone you know **desperately** needs to know about this revolutionary new technique and that there is still hope for them. I am asking that you please share this information and photos. You can feel satisfaction knowing you have helped change their life for the better too.

Good News. Who Wants to Live Longer?

One of the things we've learned just in the past few months from new medical studies is that you may LIVE UP TO 10 YEARS LONGER just by having a healthy mouth! Patients that have diseased mouths DIE sooner and have more heart attacks and strokes. Getting your dental health back extends your years.....but there is bad news.

....and the bad news.

With this new scientific information, we know that as your dental problems get **bigger** and your number of options shrink, your risk for dentally related heart attacks and strokes keeps growing. The sooner you get back your dental health, the sooner you can begin to reduce these dental risks to your own health for years to come.

Want to Stay Out of the Nursing Home? Then Get Your Teeth Fixed

Another recent study showed that your odds of being in a nursing home are much higher if you wear dentures because of denture related health problems that help rob you of your independence. Things are usually so bad in your mouth at that point that you can't wear your dentures anyway and even if you could the nursing staff often times loses them! All this means that the denture wearer in the nursing home suffers ever worsening medical problems from poor nutrition and lack of attention from the poorly paid and overworked staff who couldn't care less. Finally, the most unfortunate thing is that the *last memories left* behind for your grandchildren is of a favorite grandparent *without any teeth*. Thanks to "teeth in an hour" and my other dental implant advancements. I am happy to say that my patients have fewer chances of experiencing these undesirable possibilities.

Yes, it is expensive to get back what you've lost...but you really can't afford not to.....

The truth is that "teeth in an hour" and dentistry that permanently solves serious problems **is expensive**. However, this is one investment that will literally *pay dividends* to your physical and mental health and well being 24 hours a day 7 days a week forever. And if that isn't enough, you will likely live to enjoy these benefits even longer. How many other things can you spend your valuable money on that comes close to delivering those same promises?

By now you've probably realized that **you really can't afford not to do this for yourself**. My team and I have literally moved mountains and found new financial options so you can get the care you really need. We are **THE** experts at coming up with financial solutions for almost any patient that really wants to get their care done correctly.

WHY WAIT?

The most important thing I can tell you is that the longer you put off seeking a solution to your problems, not only will it become ever more difficult, complicated, painful and expensive to find a workable solution BUT there will come a point when there is no solution. I've seen patients in the past few months that made what they thought were rational decisions during the recent years. They decided to put things off because of all the problems they see in the newspaper or on TV and missed their last chance for a solution and are now *miserable*. It breaks my heart every time I tell a patient that even if they had acted a few months ago, I could have taken them from being a “disaster” to a happy patient with a strong healthy bite and beautiful smile.

Right now, no matter how bad you think your problems are (even if you think they are already pretty bad), just wait a little longer and they are guaranteed to get far worse. I am sharing these hard facts with you so you understand that the time to reclaim your dental health is right now. If you act now, you are likely to have many more ways to get back your dental health; including “teeth in an hour” technology.

The Best Day is Today

Knowing all of these things, why would any patient put things off while knowing that “teeth in an hour” and other new advancements in dental implants are possible? Here’s why. It is human nature to stubbornly resist change, even when it will profoundly benefit your whole life and health. Outwardly, of course, you make excuses that attempt to justify why it isn’t a good time to take action to regain your dental health just yet. The most common one is “the time is not quite right.” Someday, you insist, “When all the pieces of my life fit perfectly together, I’ll be in a better position to take action---and get back my ability to eat comfortably and smile again.” You are only fooling yourself with that phrase.....it’s like thinking that someday your train will arrive at this picture perfect station at the end of the line and then you can do all of the things you have meant to get done. That day never arrives UNLESS you take action. The reason that most patients get caught up in this delusion is they don’t know “how” to take the first step. **Your first step is a “talking” consultation** in my office to briefly discuss the benefit of “teeth in an hour” and other advanced options for your individual situation. Yes, making the appointment for that first visit is hard BUT not impossible. And of course, the “talking” consultation is complimentary to find out what new technique best provides a solution for you.

Please don't miss the opportunity to take advantage of the latest in treatment options AND most importantly, don't allow yourself to become a patient that even I couldn't help. Keep your hope alive.

Call us at **(760) 304-6455** right now to further discuss how you can get your dental health back and once again look and feel as special as you really are.

To Your Smile and Health, Dr. Jeff Allred

P.S. You can learn a whole lot more about my special methods of care, read testimonials from patients whose lives were transformed, see more before and after pictures, and find out why my services are endorsed by more doctors than any other on the West Coast with a similar practice. The address for all of this is www.AllredDental.com

P.P.S. There are a lot of valuable free reports on the website that contains information that most patients and even a lot of dentists don't know about. Please share this site with your friends and family. You can help change someone's life for the better!

AS YOUR DOCTOR

Dr. Allred utilizes his extensive training and experience to treat even the most challenging dental situations. He has been delivering cosmetic, implant, and functional solutions to patients for over 3 years. His commitment to “doing it right” and ability to “handle just about anything” has won him the admiration of patients and other doctors. A big bonus is that Dr. Allred uses his expertise to prevent big problems from ever happening.

He graduated with special honors from the Virginia Commonwealth University School of Dentistry, given to a select few in each class based on skill and achievement and then completed an advanced certification at the V.A. Hospital in Salt Lake City, in the treatment of the medically complex patient, the techniques of sedation dentistry for the fearful patient and complex dental surgery.

He has been helping patients so they can enjoy eating and smiling again with dental implants since 2008. He has developed special methods of implant dentistry to “rescue” the denture patient and those with debilitated teeth needing complete reconstructions. He has also developed special techniques in sedation dentistry for the fearful patient. All treatment is performed in the same office. This combined with advanced techniques allow even the most compromised individual to return to a life of enjoying dental health.

For their patient’s benefit, advanced learning and the implementation of new technologies at the leading edge of dentistry is a constant for Dr.

Allred and his office of professionals. The friendly team is known for their down to earth and non-technical communication style making complex dentistry easy to understand.

He is a dedicated member of the San Marcos community where he resides with his wife and children. He treats his patients like family and is very proud to offer an exceptional dental experience in a warm, inviting atmosphere where attentive service is a top priority. His patients enjoy our state-of-art-facility where we provide all aspects of family, cosmetic dentistry and dental implant services.

Training

- Graduate with honors, University of Utah
- Graduate with honors, Virginia Commonwealth University
- Residency at Veteran's Administration Hospital at Salt Lake City.
- Trained in many, many programs with the top dentists, both nationally and internationally

Personal:

Dr. Jeff Allred enjoys a unique perspective on life due to having grown up in many countries in North and South America. He spent about six years living in Mexico and Peru due to his family's business based in Guadalajara. He also has five siblings who are all accomplished professionals, including a brother who is also a dentist. He has dedicated much of his life to service including an LDS Church mission to El Salvador for two years and multiple dental service trips. He is married to his wife Amy of ten years and has two daughters and one son. He is always active in sports and other recreational activities, he decided to settle in North County San Diego where he can enjoy the ocean and the mountains with his family on his time off. Dr. Allred is now looking forward to teaching his kids to love life the same way he does.

IMPORTANT - READ THIS!!

**“HOW MUCH WILL DR. ALLRED METHOD™
IMPLANT, COSMETIC, AND “SLEEP” DENTISTRY
COST?”**

Dr. Allred's unique Method of Dentistry means that for almost every patient there is still hope and several options to choose from. After you choose one of Dr. Allred's exclusive options to permanently solve your problems, you'll feel great about yourself having regained the normal chewing, long-lasting beauty, and comfort that you deserve.

Dentistry that works well and lasts IS expensive; just like everything else in life these days. We wish it wasn't true but it simply is. The good news is that you will have a hard time naming another investment you can make in yourself that provides the dividends of a pleasing smile and comfortable chewing 24 hours a day, 7 days a week.

Prospective patients often ask, “What's a ball park on cost?” Attempting to give you an exact range of costs for your specific situation over the phone is impossible since your problems and needs are unique just to you. We could have a “one size fits all fee”, but some patients would greatly underpay and others would greatly overpay. Hardly anyone would think that was fair! Dr. Allred devised a complete dental physical examination just for the purpose to eliminate guessing so you can get your “one of a kind” options with complete costs and length of time for your treatment.

IF YOU HAVE NO TEETH, ARE WEARING DENTURES, OR ALL YOUR NATURAL TEETH ARE “SHOT:” New teeth can be attached to implants and are either non-removable or removable from the implants. Removable is less complex and thus less costly. Non-removable are the best option and are more costly because of complexity. The lowest cost dental implant options start at \$7500-\$10,000 per jaw IF you already have a perfect denture and perfect bone structure under the denture (a VERY rare occurrence). For the newest

technologies such as "Teeth in an Hour" and "Teeth in a Day", treatment averages \$25,000-35,000 per jaw. In the most extreme cases, where patients waited a very-very long time to seek a solution, care can surpass \$50,000 PER jaw (also a rare occurrence).

IF YOU ARE MISSING ONE OR TWO TEETH:

For single teeth, a dental implant can range in cost from \$2900-\$15,000 depending on whether it is "easy" or a highly complicated front of the mouth tooth which is very difficult to conceal and make appear natural to others. In addition, cost depends on whether you select "teeth in an hour" technology.

IF YOUR NATURAL TEETH ARE WORN DOWN AND "TIRED" FROM THE AGING PROCESS AND/OR YOU ARE MISSING SOME OR MANY OF YOUR NATURAL TEETH.

You probably need a reconstruction using implants and crowns/veneers on your natural teeth. What's a reconstruction you ask? Think of it as a remodel for your mouth and just like remodeling a hundred year old house, reconstructions are complicated scenarios; all the more reason you need one of a kind answers like Dr. Allred offers. Reconstructions range from \$15,000-\$50,000 per jaw.

SLEEP DENTISTRY FOR THE FEARFUL

The cost for sleep dentistry (where you "**sleep**" through the visit) if no dental implants are involved, starts at \$500-\$700 and goes up based on how serious your problems and your specific wants for your situation.

Because Dr. Allred's time is very limited, membership in his practice is limited and by application only. Your next step is to apply to become a member and have a complete dental physical examination so you are no longer guessing about what your care will cost. The sooner you do, the sooner you'll be on your way to comfortable chewing and a smile you'll be proud of.

***About medical and dental insurance:** Even though the latest dental technologies are considered medically necessary and are scientifically proven, dental plan coverage to rescue the worst dental disaster patient hardly touches what is needed to get you back to the healthy life of eating and self- confidence you deserve. The objective of the insurance company is to give you the cheapest possible care. This seldom provides for anything beyond basic generic emergency based treatment which is not what Dr. Allred Method Dentistry is all about.*

Here are some ways that our other patients managed their costs and got their care done:

- ▶ Using cash (5%), credit (5%) and senior (5%) discounts for payment in full to reduce cost.
- ▶ Based on prior credit approval, in-office financing terms of 3 months (interest free)
- ▶ Interest Free Dental financing. We have several companies that can finance up to \$50,000 for care and in some cases even more based on your credit history.
***Subject to approval**
- ▶ MasterCard, Visa, or American Express time payments.
- ▶ Budgeting for your care over 2 years to make it more affordable.
- ▶ We also offer a “cruise plan.” You pre-pay every two weeks until you build up a balance to start.
- ▶ Home equity loans; we can recommend several mortgage brokers to set this up.
- ▶ Loans from 401K/Pension plans (you pay yourself the interest); we can help start this process with your employer.
- ▶ Loans from life insurance/annuity policies; our accountant’s office can help with this.
- ▶ Settling a Universal Life Policy that you or a family member no longer needs. We can refer you to someone who specializes in this transaction.
- ▶ Refinancing an automobile or other asset; we can direct you to several sources for this.
- ▶ Medical Savings account through an employer’s cafeteria plan; we can talk to your employer.

- ▶ Gifts or Loans from friends or family members.
Dental Insurance usually pays a maximum yearly benefit of \$1,000-2,000 for your care.
- ▶ EXTERNAL Lines of Interest Free Dental Credit are available
**subject to approval*
- ▶ Medical Insurance rarely covers anything related to the mouth (Dr. Allred has only seen this one time!) In the highly unlikely event that your company administers its own plan (self- insured employers), your company administrator might allow implant care; your company would know the specifics.

Dr. Allred Method Dentistry is tax deductible for most patients. Even if you finance your care, you can deduct the full amount in the year that you start treatment. In fact, Uncle Sam's tax laws are in your favor to do your dental work as it is a legitimate medical deduction. Your tax adviser can help with this.

Dr. Allred also provides you things you won't get anywhere else. To name just a few: **Dr. Allred is one of the only San Diego County dentist's that can give you "Teeth in an Day/Hour" with dental implants, that uses his exclusive & proprietary Methods of Implant & Sedation Dentistry to keep your total number of visits to an absolute minimum and that can take care of every dental problem you have in one single office location. He also provides you with a unique dental warranty that you won't get anywhere else.**

Dr. Allred and his team look forward to working with you to give you back the health, chewing, and comfort that you deserve with Dr. Allred Method Implant, Sedation and Cosmetic Dentistry.

No teeth, no problem

HAVE A BITE: Fagun Block recently underwent the new "Teeth in an Hour" procedure for her top teeth.

'Teeth in an Hour' allows people to trade a toothless grin for a brand new set of permanent pearly whites

By MURRAY KRAM
THE ORANGE COUNTY REGISTER

As the odds of getting her going to get it when you're 57 and you've lost all your teeth, the "Teeth in an Hour" may not be such a bad idea. Local dentists are being overwhelmed by more and more people, like Fagun Block, who are in need of

low-cost teeth with permanent dentures in 2005. The process involved several operations over the course of two days, but the combined cost was less than \$10,000 for her top set of teeth, and she was happy with the results.

Still, when her dentist told her about an experimental technology that could make her get her teeth in a few painful, one-hour operations, she decided she could do some shopping.

And she was.

"The first company I went to had the best one you can find. It was nice, nice, done," said Block, of Troway, who always goes to the best she can. "I am very pleased with the way it turned out."

Patients across the country will soon be eligible for the same quick smile. The procedure, named "Teeth in an Hour," had been

experimental when they achieved it in 1983. But a 1995 dental conference in Las Vegas, the approach still seems extremely

At least 15.5 million Americans are missing some or all of their teeth, the research shows. That was great enough for the press to set up parking in aging baby boomers.

Although there are people are losing their teeth as they age, the number of severely damaged teeth has increased 15 percent from 1975 to 1995, according to the American Dental Association — a trend that reflects the growing value of a pretty smile.

Dr. Peter C. Robinson, a Washington dentist who has been teaching cosmetic dentistry for 25 years, said the dentists he'd speak had struck the success of other procedures such as bonding, veneers, crown lengthening and whitening.

"When patients returning to the dentists, they have more money and confidence in dentists and are going through a diagnosis without seeing a whole bunch of missing spaces," Robinson said.

Kenneth Mendon, vice president and general manager of Modern Business's Florida American headquarters in Yulee, Fla., which makes the teeth in its three facilities, said beauty isn't always enough. Dentists are also starting to care for people with medical conditions.

"Ideally, if you can get back what God gave you, that's a miracle work," he said. "Dentists want patients. They give water to their patients."

The Dallas company conducted an evaluation with dentists across before getting FDA approval with the use of an *in vivo* model. It means work with have polished the cavity.

The "tooth" in *in vivo* is an *in vivo* or the length of the actual surgery to install the implants. But about 100 weeks' worth of work go into manufacturing the patients' mouth, placing the surgery and installing the procedure, partly online.

Patients don't see the behind-the-scenes work. But given into making the implants, but they notice a marked difference in how information they have to spend in a dental office, said Dr. Christopher Munkwitz, a Houston prosthodontist who participated in the clinical study.

Currently, patients who want dental implants must first undergo surgery that shows open the patient's entire "jaw line." The implantation takes

three cylinders of metal is placed in the jaw bone as replacement for an incisor. The graft is placed over the implant, and the implant is left alone for three to six months while it fuses into the bone and the gum level. Next the dental structure is extended, called a post, to the implant that will serve as the foundation for the final tooth. Once the metal has fused to the bone, the dental structure is cast in a crown — which looks like a natural tooth — in the post.

"Ideally, if you can give back what God gave them, that's what people want. Patients want teeth now. Everyone wants immediate gratification."

APRIL 2008
TEETH
THEY'RE
THE
THE
THE

In the new procedure, patients typically get a CT scan, which information to create a 3-D digital image of their mouth. The image allows dentists to do a "virtual surgery," showing the placement of the implants in the mouth digitally, without having to cut open the gums.

When patients return to the dentist, their mouths have been preoperated and waiting for their teeth. The dentist can now insert the implant. Rather than putting the patient under general anesthesia and performing a pain, lip surgery, the cut is made into a small incision and "pre-cut" holes in the gum where the implants are to go.

"They have less swelling and less pain," Munkwitz said.

Robert Broun is reporting the procedure to the people using dentists who are looking to immediately increase sales in dentists are only their patients' oral health, but their appearance, too.

"Aging baby boomers want to look good," Mendon said. Along with straightened teeth and proper brushing, people want straighter smiles, and replacing it with teeth with prosthetic implants can give the smile back 20 years.

"Older people want to be better about their teeth. It's not different than the women who go for hair care every month," Robinson said. But people who get their teeth well restored feel as well have to keep the teeth. They're happy to go to a dentist who can give them both regular and teeth in an hour. Implants can cost as high as \$2,000.

Cheri says the price tag for new teeth is well worth it. "It's better than a root canal," she said. "It's a great way to get back on track."

www.dental911.us

A new set of teeth

There are several ways to get a new set of teeth. The most common is to have a full set of dentures made. But there are other options, such as dental implants, which are a more permanent solution.

In the dentist's office

Information provided in the lab

Back to the dental office

After the dental implant is placed in the jawbone, the dentist will place a temporary crown on the implant. The permanent crown will be made in a dental lab and placed on the implant when the implant has healed.

In the lab

Advanced Technologies in the 21st Century Dental Practice

We offer a dynamic combination of advanced technologies in one convenient location. Many practices would refer you to several offices to accomplish the same care. The best that dentistry has to offer combined with personal service and down to earth discussion of your care will make your experience with Dr. Allred's Method unique from other practices.

Same Day Crowns

No more goop or lousy temporaries that come off and are uncomfortable. You come in for a crown and you leave with your final all porcelain crown.

Intra-oral Camera--lets you see and understand what's going on

This is not only a diagnostic tool for me, but an educational supplement for you.

This camera looks like an oversized pen, and magnifies the surface areas of the teeth. It helps me to locate small pits and cracks that might be harboring disease. This up-close information is immediately available to both you and me on a TV monitor in the private room.

This visual feedback also helps you to see certain features in your mouth, and better understand my recommendations. For instance, it's possible to see the damage caused by old, metal amalgam fillings that expand and contract, and can cause cracking and breaking.

With Sedation Dentistry, You Feel Nothing!

Even the most fearful clients can say goodbye to the white knuckle experience of going to the dentist.

If you've avoided the dentist for years due to bad experiences in the past, you can now comfortably snooze through even the most complex care, thanks to Dr. Allred Sedation Dentistry.

Complex treatment that used to require many visits or even months of treatment can now be completed in as little as one single visit with my methods. Experience Dr. Allred Sedation Dentistry just once and you will never be afraid to go to the dentist again!

Dental Laser Works With No Anesthesia

We use an advanced dental laser to gently and effectively treat the ravages of gum disease usually without numbing anesthesia. It helps stop the progression of tooth-destroying and bone-destroying disease. Laser treatment helps to eliminate the need for conventional, often painful, gum surgery in up to 75% of cases.

The laser can also be used to gently and artistically refashion the gum line. It can turn short teeth or a gummy smile into the smile you've always wanted. It also improves the result and accuracy of complicated dental procedures.

Needle Free Anesthetic Is a High-Tech Way to Feel Nothing

This new type of anesthetic allows numbing of gum tissue for comfort during deep cleanings, without the need for the old-fashioned "stick" of the dental needle.

Advanced Local Antibiotics Puts Treatment in Just the Spot That Needs It

For clients undergoing treatment to halt infections in the gum and bones that cause tooth loss, my hygienist often uses a type of antibiotic that is completely painless. This means the antibiotic is more effective because the infection is "hit hard" by its direct application to the problem. It also means that you don't expose your whole body to an antibiotic, so that medicine will remain more effective in the future against bacteria.

Medical Topical Anesthetic Pastes Ensure No More Pain

Say good-bye to feeling the dreaded anesthetic needle. I use a medical breakthrough that is a special medical grade anesthetic paste. It allows for completely painless injections. Clients can't believe that they just had a shot.

One-Visit Root Canals Are More Comfortable and Takes Less Time

The root canal is a procedure that has kept many people away from the dental office—including those who might not need one—due to the bad reputation behind the term. Much of the fear came not so much from the discomfort, but from the technique used. In many offices, it's still a manual and imprecise mechanical process.

At my office, I use the latest technology. I can precisely locate the apex of the root electronically and with a computer-controlled device. I can then remove the damaged or diseased root efficiently and more comfortably.

Dental Implants (Tooth replacement) The ultimate in dentistry.

Replaces missing teeth, bridges, dentures, and partial dentures for return to natural chewing. For those with dentures or with missing teeth, the most life changing service dentistry offers. Surgery and prosthetics performed in a convenient location—few offices can do this. Stops bone loss and facial changes related to missing teeth. An alternative to root canals in some cases. Reduces chance of further tooth loss over all other treatment options.

Ultrasonic Gum Technology with Antibacterial Medication Reduces Gum Surgeries

Improves treatment result of gum disease therapy. Latest scientific therapy for combating gum and bone disease is to customize treatment to each patient's care with gum disease therapy. Reduces need for traditional gum surgery. Cosmetic Smile Simulations—See Your New Smile in a Matter of Hours. See your smile right away!

Digital X-rays for added Safety.

Unlike traditional x-rays, allows for three dimensional viewing of jaw bone, jaw joints, and sinuses. All films needed for surgery, joint problems, orthodontics, and routine care can be taken under the same roof without referral to a special facility for patient convenience-very few offices can do this. Allows for safer, more precise surgical planning.

Rapid Treatment Braces

Advanced orthopedic appliances for adults and children to improve orthodontic treatment results. Ensures that muscles, ligaments, and jaw joints are take into consideration instead of the traditional “straightening” of the teeth only concepts. More physiologically comfortable and healthier result. Increases long term treatment success. Reduces need for extractions.

Cosmetic Dentures- So Real They Fool other Dentists

Allows for superior fit, superior cosmetics, and lifelike results for those who require dentures.

Digital Photography

For email transmission of photographs for consultations and rapid simulation of your new smile.

Self-Contained Water Lines

Allow safe dental waterlines as compared to city water system.

Electronic Dental Insurance Claim Transmission

Ability to check benefits and submit claims more rapidly.

Ultimate Power Bleaching – Hollywood White-Guaranteed.

A Rare Find In Our Busy Lives!

Two and a half years ago I started doing research and interviewing dentists for a complete mouth restoration. I interviewed with dentists from Tijuana to Orange County. Yes, I spent a lot of time in dentists chairs searching for the perfect one for me. I came upon Dr. Allred by accident. I wish all accidents would be this positive! Within ten minutes of meeting him, I knew he was the one I had been searching for. He had knowledge, integrity, great patient doctor communication skills, innovative and to my amazement affordable!! We started the restoration Nov. 2011. I have never regretted my decision in choosing Dr. Allred. His staff are a reflection of him, they are all wonderful, kind and compassionate! My friends have been amazed by my mental and physical strength throughout the process. I owe a large part to Dr. Allred and his staff. They gave me encouragement when I was down. When I was in pain I was given same day appointments. They called or emailed after critical appointments. I have felt the entire office cared about me and my well being. This is a RARE find in today's world!!! My smile is absolutely beautiful!!!! Thank you Dr. Allred, Marlene and the rest of the office I didn't come in contact with! **B.S.**

I Can Smile Again

I can not say enough about Dr. Allred and his staff. For the first time in years, I can feel good about my smile thanks to this amazing team! Also, they believe cost should never prevent needed treatment. A thousand "thank you's" to Dr. Allred and staff. **D.H.**

I Love Allred Dental

"I love Allred Dental. My teeth have hurt for years and Dr. Allred has really made a difference. For the first time my teeth could be cleaned with a high powered water pik and it didn't hurt. I now have a beautiful smile and teeth that don't hurt. I am so appreciative of the difference he has made!" **F. H.**

Great Dentist!

"All staff were extremely friendly and helpful! Everyone went out of their way to make me comfortable. All options and expenses were discussed with me prior to services rendered. Dr. Allred personally called me later in the afternoon to check on me and gave me his cell phone number for emergencies! I would recommend this dentist to anyone!!!" **A.T.**

Painless Tooth Extraction

"Wow totally painless comfortable experience! i have little or no recovery pain as well. Thank you." **I.C.**

Friendliest staff and most beautiful office

Friendliest staff and most beautiful office makes for a dental experience even the kids look forward to. Thank you Allred Dental for taking such good care of our family! **A.G.**

Friendly and Caring

Everyone at Dr. Allred dental is awesome! They are friendly, caring, collaborative, organized, and helpful. They use the newest technology, but are affordable. My 4 year old is not afraid to visit Dr. Allred, who is great with kids! It is all around the best dentist for the whole family! - **Anonymous**

Highly Knowledgeable Dentist

Dr. Allred is very patient and has a great staff. The entire experience was well organized and executed. Very pain-free visit. -**Anonymous**

Excellent Care!

This was the first time I had work done at Allred Dental and I found my experience to be as comfortable as it could be given what I had to have done. I think that Dr. Allred is very good at what he does and makes every effort to make sure his patients are as comfortable as possible. I really appreciate it! **K.C.**

Excellent Care

I've been a patient of Dr. Allred's for a couple of years now. The office is very nice, the staff is friendly and Dr. Allred has all the high tech equipment. My whole family goes there and we couldn't be happier. **Anonymous**

Fun, Fun, Fun

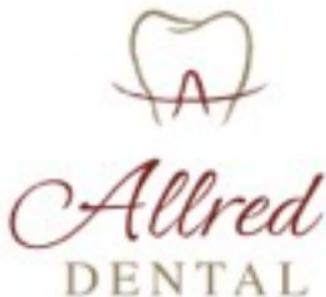

I have fun every time I visit. **A.R.**

Finally ... I found "My Dentist"

I was made to feel comfortable by Dr. Allred and his staff... From my first phone call with Heather to my consultation with Dr. Allred and Marlene. Dr. Allred and his staff are knowledgeable and eager to answer all your questions. Finally and most importantly... My actual appointment to begin my implant procedure... I am getting three implants done in my lower jaw. I had my appointment yesterday and today I have no bruising or ill effects from yesterdays surgery! I've been to other dentists and this is a first! I am extremely happy with my whole experience... Even the price! Thank you, Dr. Allred and Staff, Sincerely, **J.S.**

Excellent Service!

I had a consultation for an implant at Dr. Allred's office. The office was very nice. I didn't wait at all. Everyone was friendly. Dr. Allred explained everything in detail. Heather was able to give me ins. breakdown quickly. Great experience! **S.M.**
