

SCULPTRA AFTERCARE

To help ensure safe use and obtain optimal results, it is important that you comply with the aftercare instructions provided by the doctor. Here are 4 simple things to do after each session:

HAVE AN ICE PACK READY

Apply an ice pack (wrapped in a clean cloth) to the treated area every 1-2 hours after treatment to minimize swelling and/or bruising. Avoid direct contact of the ice with the skin.

GIVE YOURSELF FACIAL MASSAGES

With Vaseline or Aquaphor, thoroughly massage the treated area in a circular fashion from your lower face upwards for 5 minutes, 5 times a day for 5 days after each treatment.

This helps to evenly distribute Sculptra and promote a natural-looking correction.

AVOID EXCESS SUNLIGHT AND UV EXPOSURE

Minimize exposure of the treated area to excessive sun and avoid ultraviolet lamp exposure until any initial swelling and redness have disappeared.

CAREFULLY CONSIDER OTHER PROCEDURES

If you have laser treatment, chemical peeling or any other skin procedure based on active dermal response after treatment, there is a possible risk of eliciting an inflammatory reaction at the implant site.

This also applies if Sculptra is administered before the skin has healed completely after these procedures.

KEEP IN MIND

- Multiple sessions (no sooner than 4 weeks after the injection session) are usually needed.
- The number of treatment sessions depends on various factors, such as your needs and severity of the area you want corrected. At your initial treatment, Dr, Bodian will determine how many follow-up treatments may be required.
- When Sculptra is first injected, you may notice an immediate plumping effect which gives the appearance of a full correction by the end of the treatment session.
- The original skin depression may initially reappear, but the depression should gradually improve within several weeks as the treatment effect of Sculptra occurs.
