

## Custom Dentures – Get Ready to Smile Again

Meticulously crafted to your precise specifications, custom dentures are individually made to provide a lifelike look and a flawless fit. Most practices in the DentalWorks network offer a number of affordable options; you choose the size, shade, and type of teeth that suit you – and your budget – best.

If you've lost some or all of your natural teeth, don't worry. With dentures, you can restore your smile and regain your confidence. They're custom-designed and specially fitted down to the tiniest detail to match your bite and flatter your appearance. Practices in the DentalWorks network are so confident you'll be pleased with how your new dentures look and feel that they're backed with some of the longest warranties on the market.

When you come in for your consultation, the dentist determines what your needs are and recommends which tooth shades, sizes, and materials are right for you. Specially trained staff will then meticulously customize a pair of dentures that conform to the contours of your face while complementing the color of your hair and the complexion of your skin. The latest techniques are used to ensure a more precise fit, reducing the necessity for adjustments later on.

Many of the DentalWorks affiliated practices offer on-site labs for faster turnaround, so you can be smiling again in no time.
