

## Custom Partial - Replacing Teeth, Restoring Smiles

Losing teeth can wreak havoc on your health as well as your appearance. Partial dentures fill in the gaps created by missing teeth to make your smile whole.

Losing a tooth can have a profound effect on how you talk, eat, and look. Fortunately, DentalWorks affiliated practices can repair your smile by replacing missing teeth with acrylic or cast metal partials. Some DentalWorks affiliated practices even offer additional options, including implant dentistry; call today to learn more.

### Acrylic Partial

Natural in appearance, acrylic partials come in your choice of six shades and are backed by a 12-month warranty.

### Cast Metal Partial

Even though they are made of stronger materials, cast metal partials are less bulky. So they fit better and last longer, providing years of comfort. Available in a wide variety of shapes, sizes, and shades, cast metal partials are backed by a 36-month warranty.

### Flexible Partial

An innovative alternative to traditional partials, flexible partials use a lightweight, gum-colored plastic to create a more blended, natural appearance. As easy to put in as they are to take out, they fit securely into place using clasps that curl around the necks of the teeth. Since the clasps are similar in color to the surrounding gum tissue upon which they rest, they are almost impossible to detect. Biocompatible and non-allergenic, the FDA-approved plastic makes these partials virtually unbreakable.
