AeroForm is designed for women who want to take their breast cancer head on, and want to undergo breast reconstruction on their terms and their timeline. We’re committed to helping women regain the control that has been taken away during their journey.

AeroForm is a revolutionary needle-free, breast tissue expander for women who elect to have reconstructive surgery following a mastectomy. Unlike traditional saline expanders, AeroForm is designed to bring control, convenience and comfort to the breast reconstruction process.

### How AeroForm works
During surgery, your surgeon will place the AeroForm Expander under the skin in the space created by the mastectomy procedure. You will be able to start the expansion process once you have healed under the direction of your doctor. With AeroForm, you will be given your own personal Dosage Controller so that you can comfortably dose yourself up to three times a day. And of course, AeroForm is designed to give you the natural shape you are looking for.

**CONTROL**
AeroForm is the only tissue expander that empowers you to control your expansion.

**CONVENIENCE**
With AeroForm, you can expand whenever and wherever you want.

**COMFORT**
AeroForm gives you the first and only needle free expander for breast reconstruction.

### About AeroForm
