# Why truSculpt® iD?

truSculpt® iD allows you to personalize your ideal body with a revolutionary non-surgical, body-sculpting treatment. It's comfortable, reliable, and is clinically proven to permanently eliminate fat cells in stubborn areas around your abdomen and decrease circumference in your flanks.¹ This can all be achieved in as little as one 15-minute treatment. With truSculpt® iD, you can get the body definition you want, even in areas that have been resistant to diet and exercise.

#### truSculpt® iD Features:

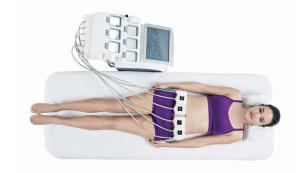

### How does it work?

truSculpt® iD uses innovative Monopolar RF technology to selectively target fat and therapeutically heat it – until fat cells are eliminated by passing through the body naturally. Clinical studies resulted in an average of 24% fat reduction.

## How many treatments are needed?

Multiple areas can be treated in as little as one 15-minute session. Maximum results are visible after 12 weeks. Additional treatments may be required to achieve the personalized results you desire.

#### How does it feel?

truSculpt® iD procedures are typically described as feeling like a hot stone massage. During treatment, the temperature of your skin will rise but remain comfortable. The results are even and consistent.<sup>1</sup>

### Is there really no downtime?

Post-procedure, the treatment area will be warm and flushed for less than one hour. While you may experience mild sensitivity to the touch for a few days, you'll be able to immediately return to normal activities and exercise.

## What can it do for my arms and legs?

Go sleeveless or wear shorts with full confidence: targeted arm and leg treatments will improve shape, definition and contouring. Treatments can be done on upper arms, inner and outer thighs of all shapes and sizes even on areas with skin laxity. Feel better in your clothes, look better out of your clothes and flaunt your youthful shape.

truSculpt® iD common treatment areas include: abdomen; flank; upper arms; back; and inner, outer, and back of thighs.
