

Vision Correction Information Kit

Your Vision, Our Passion.

Referred to by many in the industry as “the eye surgeon's surgeon,” Dr. Aaron Waite is a board-certified, fellowship-trained refractive surgeon, specialized in advanced vision correction. He is highly sought after by other physicians in the United States to perform their personal eye surgeries.

Dr. Waite is a published author in multiple peer reviewed journals, including the American Journal of Ophthalmology and Journal of Cataract and Refractive Surgery. He is frequently invited to speak at symposiums and seminars, and continues his research studies in refractive and corneal surgery.

“When patients trust me with their eyes, it's a sacred trust.” —Aaron Waite, M.D.

Common Vision Problems

THE EYE works like a camera where light passes through the lens and is focused on the film forming an image. In the eye, light rays pass through the cornea and lens and then strike the retina where an image forms.

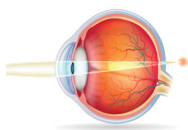

THE CORNEA is the clear window at the front of the eye that provides most of the eye's focusing power. The lens, which sits inside the eye behind the pupil, accounts for some of the remaining focusing power. Together the cornea and lens function to focus light rays onto the retina so the image is clear. Myopia, hyperopia, and astigmatism are all refractive errors that blur vision.

CHANCES ARE you are either nearsighted or farsighted with some level of astigmatism. At your initial exam, we will check your eyesight and determine your specific challenges. If you are struggling to see clearly due to nearsightedness, farsightedness, astigmatism, or presbyopia, we encourage you to come by our office for an Advanced Ocular Analysis with Dr. Aaron Waite.

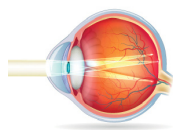

Nearsightedness (myopia)

In a myopic eye, the corneal surface is too steeply curved, and the light rays are focused in front of the retina, resulting in a blurry image. To a nearsighted person, distant objects are blurry and near objects are clearer.

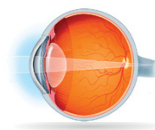

Farsightedness (hyperopia)

In a hyperopic eye, the corneal surface is too flat, and light rays are focused behind the retina, resulting in a blurry image. To a farsighted person, both distant and near objects are blurry.

Astigmatism

In an astigmatic eye, the cornea is shaped more like a football than a basketball (spherical). Light rays are focused at multiple points, again creating a blurry image. Many people with myopia and hyperopia also have astigmatism.

Presbyopia

Refers to a natural weakening of the eye that comes with aging, usually in the early to mid 40's. A presbyopic eye loses its ability to focus on near objects, like text in books or newspapers, and reading glasses usually become necessary.

Vision Correction Methods

The need to change the focus of the eye occurs when there are refractive errors traditionally called nearsightedness, farsightedness, and astigmatism. These errors can be temporarily resolved with the use of glasses or contacts, or permanently resolved through LASIK.

LASIK is an elegant procedure with astounding results and considered by many to be the single most successful elective method of vision correction. It happens to be the most common procedure performed because of its quick recovery and long track record (over two decades).

At Waite Vision, visual freedom from glasses and contacts is safe, affordable, and built around you. If you are not a candidate for LASIK, one of our other vision correction procedures will be suggested.

Other Vision Correction Methods: SMILE, Corneal Inlays, Implantable Contact Lens, PRK, and Refractive Lens Exchange.

Life in focus.

What to Expect During Your Consult

ON THE DAY OF your Advanced Ocular Analysis, you will be guided through our paperless process as we gather the necessary information needed for your assessment. The cost of this exam is \$150 (normally a \$750 value). While this assessment is not covered by insurance, it does go toward your vision correction procedure.

We will check the overall health of your eyes and stability of your vision to make sure you are an excellent candidate for vision correction. We will then measure your eyes to find out what procedure works best for you, while checking for any pre-existing conditions that could affect your vision correction procedure.

AS PART OF THE EXAM, you will meet with Dr. Waite along with our refractive counselor. You will have plenty of time to ask them additional questions, discuss pricing, financing options, and schedule your vision correction procedure if you decide to proceed. Our top priority is that you feel informed and comfortable at every stage.

Your Vision, at Its Best.

Starting at \$2250 per Eye

Vision correction empowers you to fully enjoy life without worrying about your vision. Isn't it worth it? We like to think so. Imagine what it would be like to get up in the morning and not fumble around for your glasses or contacts.

We spare no expense when it comes to your eyes. That's why we embrace above and beyond accuracy and safety, using only the most advanced laser platforms and vision correction methods available anywhere.

At Waite Vision, the word "compromise" does not exist. We set a high standard for care. Our pricing is all-inclusive, with no upsells or deceptive marketing. Your post-op visits are covered, because your vision is our guarantee. A VIP treatment from beginning to end, with no wait times—that's our promise.

Call (801) 876-6000 or Visit waitevision.com

Think Affordable. We did.

The one-time cost of vision correction is far less than the cumulative recurring expense of glasses or contact lenses, and you're making an investment in yourself. You'll immediately discover the significant improvement in the quality of your life when you're free of glasses or contacts. Picture the ability to go camping, swimming, skiing, or on vacation without the fuss of contacts or glasses. The benefits are endless.

A common myth is that vision correction is expensive and out of reach. Not at Waite Vision. We believe the gift of sight should be available to everyone. We empower you to give yourself or your loved ones the gift of visual freedom.

Start experiencing life in a new way through our easy financing plans starting as low as \$99 per month. Our credit partners, Utah Community Credit Union, ALPHAEON, and CareCredit, allow you to finance your procedure—without paying any interest.
