# Smile Lift...

## Conservative Dental Enhancements

By Jeffrey A. Weller, DDS

With all the excitement over extreme makeovers, why not try a smile lift. This minimally invasive dental makeover can lift the lower third of your face. You can have a beautiful, younger and natural look in as little as two office visits.

A cosmetic dentist with an artistic eye and advanced clinical skills can obtain a beautiful and functionally sound smile with the latest advancements in porcelain veneer techniques and laser gum contouring.

Have you looked at your smile lately? Are you happy with the appearance of your teeth? Do your teeth appear worn on the edges? Misalignment, spaces, discoloring and worn edges can all be corrected to help the teeth function properly in addition to looking great.

The cosmetic dentist may begin with digital pictures and initial impressions of your teeth to evaluate your case. The

pictures can be digitally enhanced to straighten your teeth, change the shape of your teeth and even widen your smile. The doctor may take the models of your teeth and simulate your smile makeover in wax. This allows you to preview your smile's potential and is a helpful communication tool for the doctor and patient.

A smile makeover can lift your smile. Utilizing porcelain veneers to slightly increase the size of certain teeth and improve your bite, we can accomplish what some refer to as "the rubber band effect". Your smile will be enlarged and will result in enhanced lip support. You will find that these enhancements are much more rewarding, than simple teeth whitening.

An attractive smile is a tremendous benefit in all business and social settings. Your new smile will set the stage for a long lasting and positive first impression.
